Well Drilling

WELLS

Skills & Sons goal is to handle all your water needs. Artesian well drilling in New England bedrock is our family tradition. Over the years, we have found that no two wells are created equal. Soil and bedrock depths vary depending on your location. Bedrock wells are typically 6 to 8 inches in diameter, structured by three components: well casing, bedrock, and water bearing fractures. Well casing supports the upper portion of the well and protects the well from harsh elements found in ground surface and soil. The layer of bedrock in the Earth's crust allows water to pocket and flow through factures, providing water to your well.

IRRIGATION WELLS

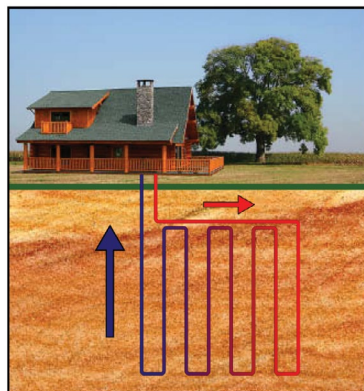

Avid gardening and green lawns require an abundance of water! With an irrigation well, you eliminate the risk of your primary well running dry. We drill irrigation wells for homeowners, garden centers, greenhouses, and farms.

If you have municipal water and your town imposes water bans in the summer, an irrigation well is a second choice to keep your lawn green and your gardens growing. Over time, an irrigation well will pay for itself by lowering your monthly water bills during warmer weather.

GEO THERMAL

Geothermal exchange is a method which utilizes the Earth's natural ground temperature for heating and cooling your home or business. Outdoor temperatures fluctuate season-to-season, but four to six feet below earth's surface, the temperature remains relatively consistent year-round. During cooler weather, heat is absorbed from the earth and transferred into the building through water or water solution. Indoors, energy from the heat pump exchange raises the temperatures and distributes throughout the home. For cooling, the process is reversed. Heat is absorbed from the building and transferred back into the earth. Geothermal heating and cooling provides the opportunity to save money, energy, and the environment.

WELL SERVICE

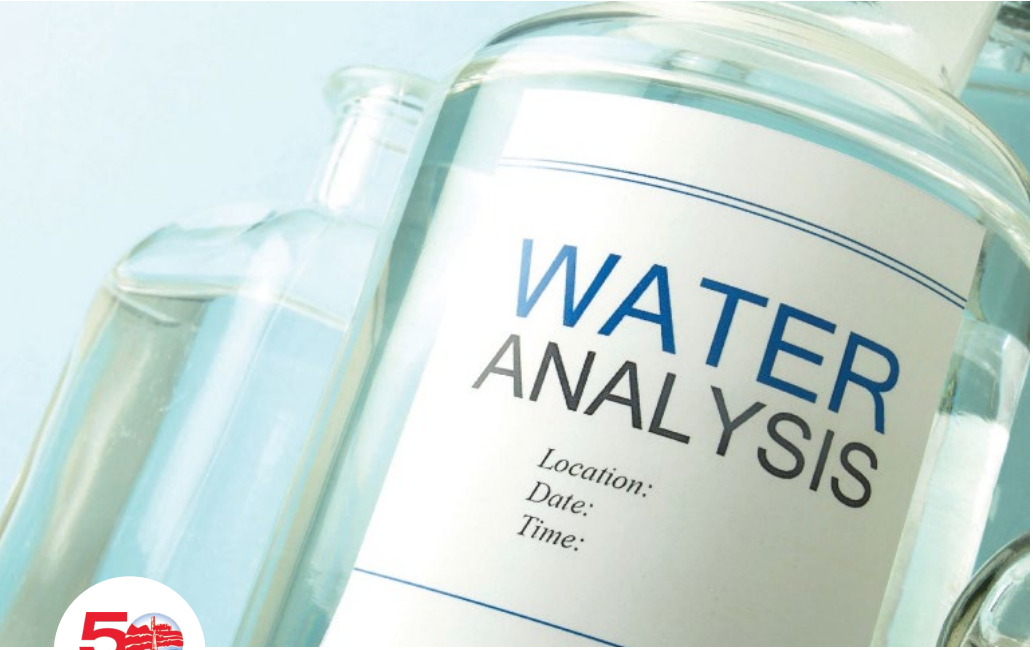

Water is a necessity. As a full service well water company, vast experience has shown that the pump and tank of your water system is the heart for your running water. Preventative maintenance on this system expands the life of the pump within the well. Only the highest quality parts and components are used by Skills & Sons to guarantee the longest life of your system.

We understand the importance of running water. Our service trucks are fully stocked, equipped with the parts needed to service your entire water system and keep your water flowing.

WATER TESTING

At Skills & Sons, our goal is to provide safe, clean water for you and your family. If you are concerned about water quality or are experiencing water quality issues with appliances and fixtures, we can help!

By performing a series of water tests to determine the presence and levels of various minerals or contaminants within your water, we will help you eliminate these problems with the right water treatment system.

WATER TREATMENT

Our knowledgeable staff will recommend, design, and install a new water treatment system, as well as update and/or repair your existing system. Radon and arsenic are always a high concern in New England. Water is susceptible to quality issues which can be harmful. Installing a water treatment system removes or reduces these contaminants to EPA acceptable levels. For municipal water, we design and install filtration systems to reduce high chlorine and water hardness commonly found in our cities. The difference with Skills & Sons is clear: we will provide you the cleanest water from the ground to your glass.

WELL ENHANCEMENT

Well enhancement is the process of pumping pressurized water into a new or existing well to help open new water veins or clean out existing water veins. This can increase the overall gallons per minute in a well. A well enhancement can establish a water source for new wells and increase water production in existing wells that are not yielding enough water.

OUR FLEET

Skillings & Sons service trucks are stocked with the equipment and tools to solve well and water filtration issues. Being prepared means less travel time, faster service, and lower service fees. Whatever the job, we are equipped to do it.

Not only is our fleet fully equipped, we have our own in-house certified mechanics that maintain our vehicles so they are always ready to go. This allows us flexibility and a better response time to serve our customers.

CULTURE

We are committed to growing and moving forward with the times. Skillings & Sons proudly provides continued education and training throughout the company's broad business scope and talent levels. Detailed training for well pumps, controls, and state-of-the-art water treatment come directly from partnerships with our vendors.

Our team engages in virtual online training and classes for management and business operations. Versatile, educated employees serve Skillings & Sons vision of providing our vast array of water industry clients with the highest results.

WHO WE ARE

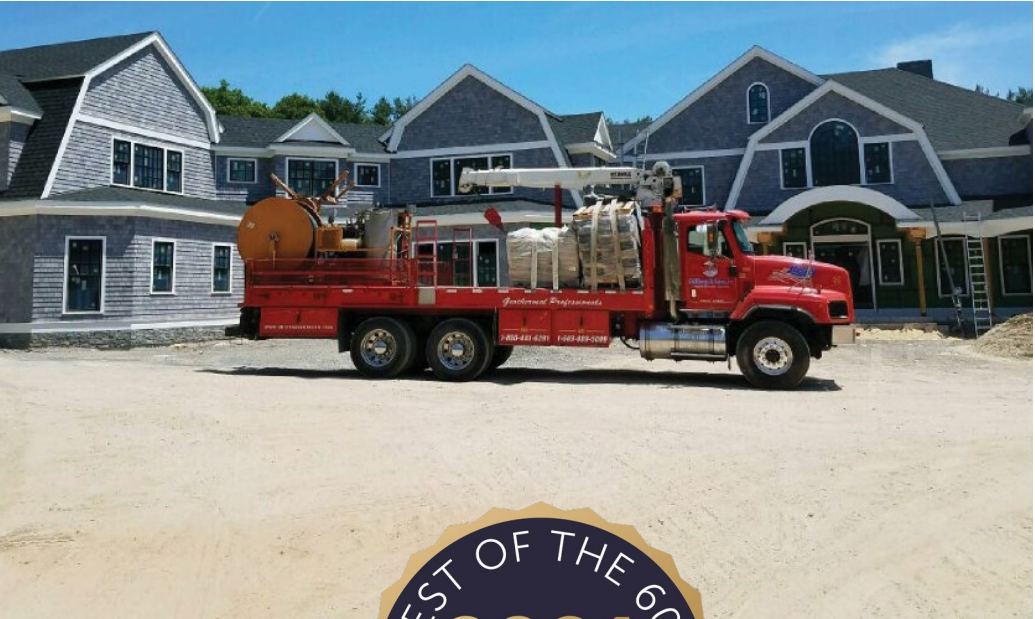

Roger and Norman Skillings, Mid 90's

Skillings & Sons, LLC. was established in 1970 as a small family business drilling wells for drinking water. Today, we are a third-generation family-owned company providing a wide range of water services from well drilling to well water filtration to geothermal exchange.

In the industry for over 50 years, with 350+ years of combined experience, we are still growing with over 75 employees servicing Massachusetts and New Hampshire. Skillings & Sons certified technicians are trained with state of the art, reliable equipment, and up-to-date procedures for servicing the water needs of a variety of clients, including homeowners, building contractors, engineering corporations, schools, and government agencies.

AWARDS

All Things Water

Since 1970

We are honored to have been recognized for our work in Water Treatment for over 50 years by our community. Thank you to our clients and friends for your continued support and for your vote of confidence.

TESTIMONIALS/REVIEWS

“ *The entire staff at Skillings, from the rep who took the emergency service call, to the crew who did the work, to the billing office, were knowledgeable and patient in addressing issues with our well.*

They were upfront about what the work would entail and answered all of my questions. They made sure I was pleased with their work and were always polite and friendly.

We have used them on previous jobs before and have been satisfied with their work each time.

-Michael

“ *We have had water pressure issues for a while and I've troubleshooted some minor things myself but never felt like it was as good as it should be. Fast forward to this weekend when my pressure essentially all but stopped.*

I spoke with a crew member on Sunday and they made sure it was an emergency. The Skillings crew was great and easy to schedule with, they had a team over within 24 hrs. The Technicians came to the house and were able to diagnose the issue quickly. They were able to replace my dated expansion tank and the other troublesome fixings with ease.

They were professional, courteous and clean. They had everything done in about two hours, and now we have great water pressure and my wife is happy! I would recommend them to anyone!

- John

“ *I had Skillings and Sons come out to my house after a week of rusty water. It was ruining my shower, tub and sink.*

I can't thank Brian enough for fixing the rust from my well. I finally have normal, clear water.

I highly recommend their service. He was prompt and professional. I will definitely use them again in the future.

- Priscilla

“ *This is our go-to company for all things water. We've been working with them since we moved to New Hampshire thirty-plus years ago and there has never, ever, been a problem with anything they have done for us.*

Their service staff (Shawn) is exceptionally reliable about communicating with me when I have a question. He guides me in the right direction with professionalism, and in a timely fashion. Shawn is always willing to take the time to be sure I understand what is going on (i.e., if we need to add an additional well to supplement our residential well because of our property's irrigation needs).

This is a top notch company and I don't think we would ever change to another supplier.

- Sandy
